

## Commercial Energy Efficiency Upgrades

*Supervisor Van Scoyoc, Deputy Supervisor Overby and Councilwoman Burke-Gonzalez with Nest thermostat installed at Town Hall*

The Town of East Hampton has updated incandescent lighting fixtures with energy efficient LED's, and installed Nest smart thermostats in 17 of its buildings. The installations were done at no cost to the Town as part of a PSEG and South Fork Peak Savers energy efficiency incentive program, which aims to reduce energy consumption and peak electric demand on the South Fork.

Replacing current lighting and thermostats with more efficient equipment reduces the amount of electricity needed by a building to operate, and lowers the amount of electricity each building uses on a daily basis. These upgrades to Town buildings will save hundreds of thousands of kilowatt-hours and tens of thousands of dollars annually.
